

The **easiest** way to protect your computer systems from Internet threats

Igaware is the easiest way to protect your computer systems from Internet threats; it involves the installation of a single Igaware box that delivers a range of Internet security services that will keep your systems secure:

Anti-Hacker | Anti-Virus | Anti-Spam | Anti-Fraud | Anti-Spyware | Web Filtering | Internet Usage Reporting | Automatic Updates | Zero Hour Protection

What's more, the **Igaware box** is easy to use, secure and so low maintenance you'd never know it was there! Used by over 800 UK organisations, Igaware has a proven track record of **first class service** and **support**.

So if you are *thinking inside the box* and looking for a solution that won't over-stretch staff, budget, or your patience, then the **Igaware box** was designed for you.

"Since we had the Igaware Box installed we've had no problems. It does exactly what it says on the tin, and the service is excellent."

Mike Rennie - Microvention UK

A Choice of Solutions

Igaware boxes deliver total protection against Internet threats.

Anti-Hacker

An enterprise class firewall prevents unauthorised access in and out of your network.. VPN functionality is available to allow remote workers to securely connect to your network.

Anti-Virus

Every email in and out of your company is scanned for viruses.

Anti-Spam

Unwanted or unsolicited email is prevented from clogging up your inbox.

Anti-Fraud (Anti-Phishing)

Emails pretending to be something they're not are identified and highlighted as a potential threat.

Anti-Spyware

Keeping what's private, private. Igaware prevents spyware programs being downloaded from the web, and filters them from incoming email.

Web Filtering

Gives you the critical controls needed to prevent and monitor harmful and inappropriate web surfing by your staff, protecting against lost productivity, system downtime and legal liability.

Internet Usage Reporting

Allows you to monitor use of the Internet and email by staff.

Automatic Updates

New threats emerge every few minutes so it is vital your security systems are updated the moment a new threat emerges. Igaware delivers continuous and automatic updates

Zero Hour Protection

As security systems become more sophisticated, many viruses have come to rely on the window of opportunity that occurs before anti-virus systems are updated. Igaware's defence systems are engineered to detect previously unknown threats using sophisticated tests on all incoming suspect payloads.

Igaware boxes are available in different configurations to protect your business whether you have 1 employee or 1000.

Delivering business advantage

Igaware's unique 'appliance technology' delivers six major advantages that will save you time, money and stress;

Low maintenance. IT systems require constant updating, patching and upgrading to remain secure and operational. But, with Igaware these happen automatically. There are no manual updates or upgrades to worry about, and no equipment to reboot. You can focus on productive tasks.

Secure at all times. Igaware boxes are continuously security hardened against emerging threats. Protection systems including anti-hacking, anti-virus, anti-spyware, anti-phishing, anti-spam and web filtering are continuously updated so you have complete peace of mind.

Compatible with both Windows and Apple Mac computers (even together). You won't need to upgrade your desktop computers for them to work with Igaware, and existing servers can operate as before.

Support is at hand, often before you know it. The health of your Igaware box is automatically monitored. If a backup has failed or a hard disk is nearing full, we can give you a 'heads up' to the issue. This proactive approach keeps you operational 24x7.

Easy to use. Igaware boxes are highly configurable via a web interface that has been designed with ease of use in mind. Day-to-day tasks such as adding new users are quick and easy. These tasks can be managed on your behalf.

Affordable whether you have 3, 30 or 3000 staff. Every Igaware box can be managed remotely on your behalf so you don't have to worry about updates. Or maintenance. Or patches. Or upgrades. You just pay a monthly fee to match the level of service you require, and your budget.

These major advantages mean you save time, money and stress.

Like most companies we like to focus on our core business and hate wasting time on non productive tasks. Previously we were running separate mail server, firewall and anti-virus/spam software which required frequent time consuming patches and often fell over. The Igaware solution provides all the previous facilities in one box saving so much time both in terms of updates and reliability. The service we've received is excellent. I thoroughly recommend it".

Igaware Network Appliance Technical Overview

General

- High performance multi-functional network appliance
- Automatic updates & system monitoring
- Easy to use
- Highly configurable
- Compatible with Windows & Apple O/S
- Choice of services
- Scalable
- Available in a range of hardware configurations including small form factor, tower and rackmount servers - RAID as standard

Server Functions

Collaboration

- Email Server (POP3/IMAP/SMTP)
- Web Groupware (web mail, shared calendars, contacts, tasks)
- Open-Xchange (supports shared calendars, contacts and tasks in MS Outlook)
- Web server
- Intranet Server
- Fax server
- File server
- FTP server
- Web Cache/Internet Accelerator

Security

- Intrusion Detection & Prevention
- Stateful Inspection Firewall
- DMZ
- VPN (IPSEC, PPTP, SSL)
- Email Archiving
- Web Content Control
- URL Filtering
- Email Security (Anti-Virus, Anti-Spam, Anti-Phishing, Content Filter)
- Web Security (URL Blocking, Content Filtering)
- Network Vulnerability Scanner

Disaster Recovery/Business Continuity

- Data Backup (to local or remote media/device)
- Automatic Offsite Configuration Backup

Network Management

- Reporting (web, email, VPN)
- Web administration interface
- Network device monitoring
- Network detection (NTOPI)
- DHCP server
- VLAN
- LDAP
- DNS
- Time server
- Windows & active directory integration (including PDC)
- Network Tools (NMAP, PING, WHOIS, Trace Route)

Support

- Fully managed solution
- Proactive system monitoring
- Automatic updates
